

CI Framework

Step by step

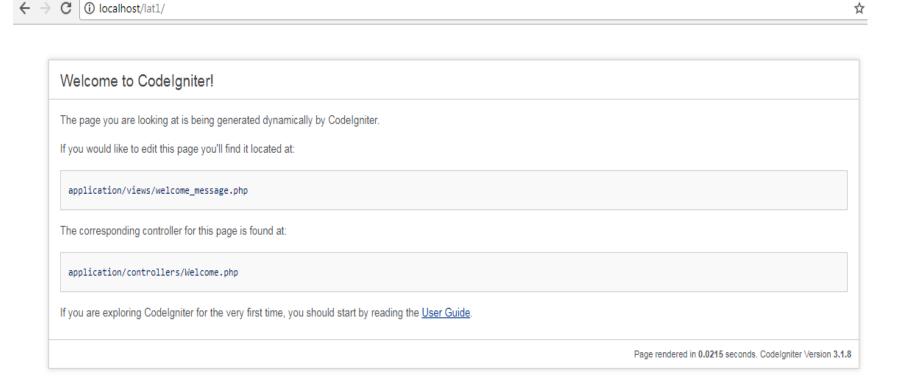

Tahapan Memulai CI

- 1. Buat folder "lat1" di xampp\htdocs
- 2. Download dan extract bundle di folder yang dibuat https://codeigniter.com/download
- 3. Struktur folder menjadi berikut: (tidak semua ditulis)

 xampp
 htdocs
 lat1
 application
 config
 controllers
 models
 views
- 4. Jalankan aplikasi dengan: http://localhost/lat1

5. Buat controller **Lat1.php** (*copy dari class Welcome*) di folder xampp\htdocs\lat1\application\controllers

```
<?php
  defined('BASEPATH') OR exit('No direct script access allowed');

class Lat1 extends CI_Controller {
    public function index() {
        $data["nama"]="Agus";
        $data["asal"]="Bandung";
        $this->load->view('v_latihan1',$data);
    }
}
```

Catatan: Nama class Lat1 diawali huruf besar

6. Buat view **v_latihan1.php** di folder xampp\htdocs\lat1\application\views

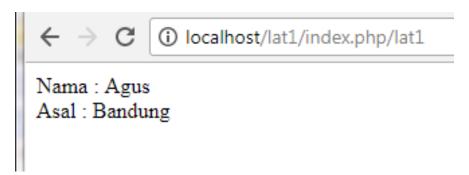

Catatan: Nama view tanpa diawali huruf besar

7. Jalankan controller Lat1:

(menampilkan view v_latihan1)

http://localhost/lat1/index.php/lat1

Catatan:

lat1 pertama: nama folder dalam htdocs

lat1 kedua: nama controller, dipanggil pakai huruf besar

Penulisan array pada controller Lat1:

Akses variabel di view dengan

```
echo $nama;
echo $asal;
```

8. Ubah controller **Lat1.php** (copy dari class Welcome) di folder xampp\htdocs\lat1\application\controllers

```
<?php
defined('BASEPATH') OR exit('No direct script access allowed');
class Lat1 extends CI_Controller {
   public function index() {
        $data["nama"]="Agus";
        $data["asal"]="Bandung";
        $this->load->view('v_latihan1',$data);
   }
   public function method1() {
        $data=array(
            "nama" => "Budi",
            "asal" => "Jakarta"
        );
        $this->load->view('v_latihan1',$data);
   }
}
```

9. Buat view v_latihan3.php

```
<h3><?php echo $title; ?></h3>
<thead>
   NoNamaAsal
   </thead>
 <?php
   sno = 1;
   foreach ($daf mhs as $mhs) {
     echo "".$no++."";
     echo " ".$mhs['nama']."";
     echo " ".$mhs['asal']."";
   ?>
```

10. Jalankan method 2 pada controller Lat 1:

http://localhost/lat1/index.php/lat1 → method index

http://localhost/lat1/index.php/lat1/method1

http://localhost/lat1/index.php/lat1/method2

http://localhost/lat1/index.php/lat1/method3

Daftar Mahasiswa

No	Nama	Asal
1	Agus	Bandung
2	Budi	Jakarta
3	Roni	Surabaya

Merubah setting rute pemanggilan

11. Ubah **routes.php** yang ada di folder xampp\htdocs\lat1\application\config agar pemanggilan controller utama tidak perlu dituliskan http://localhost/lat1/index.php/lat1/barang cukup dipanggil http://localhost/lat1 \$route['default controller'] = "lat1";

12. Ubah config.php yang ada di folder xampp\htdocs\lat1\application\config

```
$config['base url'] = "http://localhost/lat1/";
```

Merubah setting rute pemanggilan [lanjutan]

13. Buat file .htaccess yang ada di folder xampp\htdocs\lat1\ agar pemanggilan controller tidak perlu pakai index.php http://localhost/lat1/index.php/lat1/method3 cukup dipanggil http://localhost/lat1/lat1/method3

```
RewriteEngine on
RewriteCond %{REQUEST_FILENAME} !-f
RewriteCond %{REQUEST_FILENAME} !-d
RewriteRule ^(.*)$ index.php/$1 [L]
```

14. Jalankan lagi dengan:

http://localhost/lat1/ → http://localhost/lat1/index

http://localhost/lat1/lat1/method1 http://localhost/lat1/lat1/method3

Merubah setting database

15. Ubah database.php yang ada di folder xampp\htdocs\lat1\application\config

```
$db['default']['hostname'] = 'localhost';
$db['default']['username'] = 'root';
$db['default']['password'] = '';
$db['default']['database'] = 'akademik';
$db['default']['dbdriver'] = 'mysqli';
atau
$db['default'] = array(
    'hostname' => 'localhost',
    'username' => 'root',
    'password' => '',
    'database' => 'akademik',
    'dbdriver' => 'mysqli',
```

Menyiapkan database dan model

- 16. Buat/siapkan database "akademik" dan tabel "mahasiswa"
- 17. Buat model **M_mahasiswa.php** (*diawali huruf besar*) di folder xampp\htdocs\lat1\application\models

```
<?php
defined('BASEPATH') OR exit('No direct script access allowed');
class M_mahasiswa extends CI_Model {
    public function __construct() {
        $this->load->database();
    }
    public function get_mahasiswa() {
        return $this->db->get('mahasiswa');
    }
}
```

Menyiapkan Controller

18.Buat controller **Mahasiswa.php** di folder xampp\htdocs\lat1\application\controllers

```
<?php
defined('BASEPATH') OR exit('No direct script access allowed');
class Mahasiswa extends CI_Controller {
   public function __construct() {
      parent::__construct();
      $this->load->model('m_mahasiswa');
      $this->load->helper('url');
   }

   public function lihat_daftar() {
      $data['title'] = 'Daftar Mahasiswa';
      $data['mhs']['entries'] = $this->m_mahasiswa->get_mahasiswa();
      $this->load->view('v_daftar_mahasiswa',$data);
   }
}
```

Menyiapkan View

19.Buat view **v_daftar_mahasiswa.php** di folder xampp\htdocs\lat1\application\views

Menyiapkan View [lanjutan]

```
<?php
        no = 1;
        foreach ($mhs['entries']->result array() as $mhs entry){
     ?>
     <?php echo $no++; ?>
         <?php echo $mhs entry['nim']; ?>
         <?php echo $mhs entry['nama']; ?>
         <t.d>
           <a href="<?php echo base url()?>mahasiswa/lihat detail/
                   <?php echo $mhs entry['nim']; ?>">View</a>
           <a href="">Edit</a><a href="">Delete</a>
         <?php
     ?>
  <a href="<?php echo base url()?>mahasiswa/form tambah">Tambah Data</a>
```

Menjalankan aplikasi

20. Jalankan aplikasi: http://localhost/lat1/

Daftar Mahasiswa

No	NIM	Nama Lengkap	Aksi
1	13008	Saras	View Edit Delete
2	13010	Sutarman	View Edit Delete
3	13234	Budi	View Edit Delete

Tambah Data

Query pada Model

```
//query umum
    $this->db->query('select * from mahasiswa');
//select * from mahasiswa
    $this->db->get('mahasiswa');
//select * from mahasiswa where nim='$nim'
    $this->db->get where('mahasiswa', array('nim' => $nim));
//delete mahasiswa where nim='$nim'
    $this->db->where('nim', $nim);
    $this->db->delete('mahasiswa');
//insert into mahasiswa values ....
    $this->db->insert('mahasiswa', $mhs);
//update mahasiswa set ....
    $this->db->where('nim', $nim);
    $this->db->update('mahasiswa', $mhs);
```
